(a) Bell state

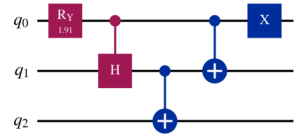

ideal: $P(00) = P(11) = \frac{1}{2}$

(b) GHZ state

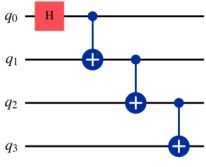

ideal: $P(000) = P(111) = \frac{1}{2}$

(c) W state

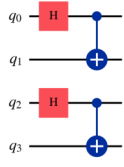

ideal: $P(001) = P(010) = P(100) = \frac{1}{3}$

(d) 4-qubit GHZ

ideal: $P(0000) = P(1111) = \frac{1}{2}$

(e) Two Bell pairs

ideal: $P = \frac{1}{4}$ on $\{0000, 0011, 1100, 1111\}$

All qubits measured in the Z basis (computational basis) after the gates shown.

Gate set: H, X, R_y, CX, CH.
